

I am participating in the **RAMPART** clinical trial.

RAMPART is a study investigating two new immunotherapy treatments in patients who have had surgery to remove their kidney cancer. I have been randomised to the active monitoring arm, which means I am not receiving either of the immunotherapy treatments.

In the event of a medical emergency or hospital admission please present this card. The main contact for information on the study is the study doctor whose contact details appear on this card. You can also contact the research team during normal office hours.
